Title:	**AM-42-1 to Res 5.: Green Data Centres for Europe: Climate-Safe and Sovereign**
Tabled by:	SF - Green Left

From line 41 to 43:

sovereignty: data centres open to foreign authorities do not become European by sitting on European soil~~ they must be built, owned~~. The establishment of datacenters shall support European digital sovereignty and ~~run by Europeans, with~~control of information, and include strong data protection and cybersecurity. As a general principle, they should be built, owned and run by Europeans

Explanation / Comment

The requirement for ownership may be difficult to implement/easy to circumvent. We suggest to focus on what should be achieved (digital sovereignty) rather than on how , but leave the oeership as a desirable method.
Consider to make it a demand - it is importat enough for that.
