

**Title:** **AM-21-1 to B-R7: Nature Restoration Law vs. EU plan for critical raw materials - challenges to protect nature and food sovereignty**

**Tabled by:** GroenLinks

### **Draft text**

#### **From line 20 to 22:**

guidelines for restoring the health of fresh-water bodies while also improving biodiversity in agricultural ecosystems ~~with the aim of improving~~ that, between other things, will improve organic carbon stock in cropland soils and promoting high-diversity landscapes.

### **Explanation / Comment**

We do not only try to improve biodiversity for carbon stock improvement (only this as an aim- as a kind of human centred goal) but also for other purposes (e.g. better fertilising possibilities by insects etc.) and most importantly also for the case of biodiversity improvement as such; from the viewpoint of intrinsic value of all other life forms
