

Title: **AM-41-2 to R2: Green solutions for more crisis-prepared, resilient and safer societies**

Tabled by: EGP Committee

Demands

Insert from line 40 to 45:

4. shocks and develop early warning systems. We must guarantee access to water, electricity, heat and other basic supplies during crises. Contingency plans must be suitably designed to ensure their smooth implementation, while mobility and the required logistics for the transport of the necessary goods needs to be ensured, including alternative routes to bypass damaged infrastructure. Governments must ensure necessary reserves to guarantee the supplies in emergencies. Our energy supply must be built on sustainable and modern solutions, including modular network design, that can survive shocks and support fast recovery e.g. from blackouts. Decentralised energy grids and micro-grids should be prioritised to prevent blackout cascades.
