Title:	**AM-73-1 to Res 3.: Climate Adaptation Against Inequalities**
Tabled by:	Verdes Equo

Demands

Insert from line 72 to 73:

tourism, reinforcing agricultural methods and traditional knowledge of shared land use.

• Resilient food systems by redirecting agricultural subsidies and general support toward agroecology, protein diversification, and local food sovereignty.

Explanation / Comment

Supporting rationale: To ensure internal consistency across the resolution, the food systems commitments introduced in the narrative section must be backed by an actionable political demand—otherwise, calls for agroecology and protein diversification risk remaining purely aspirational. Turning these principles into reality requires pairing agricultural subsidy reform with concrete enabling policies: deploying transition finance to de-risk the shift away from industrial farming, investing in regional processing infrastructure to connect farmers with local markets, leveraging sustainable public procurement in schools and public institutions to guarantee stable demand, and introducing true-cost pricing (such as lower VAT on plant-rich foods and internalizing environmental costs) so sustainable choices are affordable for everyone.
