Title:	**AM-64-1 to Res 3.: Climate Adaptation Against Inequalities**
Tabled by:	Ecolo

Demands

In line 64:

• Affordable and accessible insurance for all and public risk pooling that ~~rewards~~supports risk reduction and prevention as well as social protection that cover income loss resulting from extreme climate events

Explanation / Comment

We agree with the idea of encouraging risk reduction. However, if this is achieved through lower premiums for those who invest, it benefits households that can afford it and penalises the rest. The amendment retains the objective of prevention by channelling it through public support. It also guarantees access to insurance for all and identifies social protection as a means of adaptation.
