| **Title:** | **AM-65-1 to Res 3.: Climate Adaptation Against Inequalities** |
| **Tabled by:** | Ecolo |

## Demands

**From line 65 to 66:**

• Huge investment in climate-resilient public infrastructure, ~~including cooling systems~~, and in priority for all low-income households and tenants. Investments should focus on buildings renovation and passive cooling systems for schools, in active cooling systems wherever it is required for health-related reasons such as hospitals and elderlycare homes. Investments should also focused on flood protection, ~~healthcare and~~ water systems and healthcare especially in isolated areas

## Explanation / Comment

We are maintaining investment in cooling by setting priorities. Renovation and passive solutions come first, whilst air conditioning remains on the agenda where it protects health, for example in hospitals, care homes. Prioritising low-income households and tenants ties in with the risk of ‘green gentrification’ highlighted in lines 18–19 of the text. As for the healthcare aspect, we think that it is important that all people, including isolated ones can access during heatwave
