Title:	**AM-23-2 to Res 3.: Climate Adaptation Against Inequalities**
Tabled by:	Bündnis90/Die Grünen

Insert from line 22 to 24:

women, people with chronic conditions and outdoor workers are the most vulnerable, having fewer resources to adapt while facing greater exposure. **Even young and healthy people are at risk from extreme heat.** Rural communities dependent on agriculture and tourism, people encountering housing

Insert after line 26:

Inequality is also global: the countries least responsible for climate change are the most exposed and the least able to adapt, while official development assistance (ODA) fell by about 23% in 2025. Europe cannot protect its own citizens credibly while cutting the support that helps partner countries to adapt.

Explanation / Comment

Justification 1: Extreme heat is a risk for everyone, not only for the groups listed. The sentence makes this point without an unsourced claim about rising death rates.
Justification 2: The resolution addresses inequality within Europe but calls for international finance in the demands. This paragraph makes the link: the countries least responsible are the most exposed, while development assistance is being cut

(OECD: ODA fell by about 23% in 2025).
