| **Title:** | **AM-65-2 to Res 3.: Climate Adaptation Against Inequalities** |
| **Tabled by:** | Bündnis90/Die Grünen |

**Demands**

**From line 65 to 66:**

~~• Huge investment in climate-resilient public infrastructure, including cooling systems in buildings and schools, flood protection, healthcare and water systems~~
**• Long-term EU**investment in climate-resilient public **infrastructure and locally led adaptation, prioritising vulnerable communities and financially weaker municipalities without prohibitive co-financing**

**Explanation / Comment**

Calls for reliable, long-term funding rather than one-off spending, and for locally led adaptation. Financially weaker municipalities, which often face the highest risks, must not be excluded by co-financing requirements. The examples of infrastructure are already covered in the main body.
