Title:	**AM-74-1 to Res 3.: Climate Adaptation Against Inequalities**
Tabled by:	Bündnis90/Die Grünen

Demands

From line 74 to 75:

~~• Solidarity-based adaptation finance prioritising the most exposed communities and closing the international finance gap~~**• Solidarity-based international climate finance that is predictable, grant-based and additional to ODA: tripling adaptation finance by 2035, fully capitalising the Fund for responding to Loss and Damage, and applying the polluter-pays principle through new levies on fossil fuel profits, private jets and premium flights, so that the countries least responsible, such as LDCs and small island developing states, are not left alone with the damage.**

Explanation / Comment

For the most exposed countries, especially the least developed countries and small island developing states, adaptation finance and loss and damage are a matter of survival. At a time of cuts to development assistance, climate finance must be predictable, grant-based and additional to ODA. Those who cause the climate crisis and profit from it should pay for the damage, through levies on fossil fuel profits, private jets and premium flights.
