Title:	**AM-21-1 to Res 3.: Climate Adaptation Against Inequalities**
Tabled by:	Green Party of England and Wales

From line 20 to 26:

protection. According to the Intergovernmental Panel on Climate Change (IPCC) and the European Environment Agency (EEA), ~~older people, children, pregnant women, people with chronic conditions and outdoor workers are the most vulnerable, having fewer resources to adapt while facing greater exposure. Rural communities dependent on agriculture and tourism, people encountering housing and energy poverty, and densely-populated neighbourhoods are more vulnerable to extreme weather.~~**vulnerability to climate change is unevenly distributed across society, with older people, pregnant people, children, individuals with chronic health conditions and outdoor workers among those most at risk. These groups often experience greater exposure to climate hazards while having fewer resources and a reduced capacity to adapt.**
Rural communities dependent on climate-sensitive sectors such as agriculture and tourism face increasing economic pressures, while households experiencing housing and energy poverty and those in densely populated neighbourhoods often lack the means to protect themselves against extreme weather.
